

Organization and Business solutions

Design and implementation of architectural projects

From the design of a whole new building to internal spaces distributions, we optimize material and time required through the use of leading edge technologies. We also prepare engineering design plans with complete details and perspective.

Construction projects

We implement turnkey projects or partial ones in any phase: Supply, renovations, maintenance of offices, buildings, shed, commercial spaces and structures.

Internetworking and data nertworks

We generate and implement high, medium and low voltage electrical solutions, internal lighting system installations, network system, power and control panels, UPS, grounding systems, interconnection systems, data networks and certification

System integration, automation, intelligent building and related services

Automation and process control, sensors, intelligent networks, IoT, management systems, Odoo ERP customization and programming, servers implementation and configuration, hosting, associated services.

Supply, consignment inventory, logistics, domestic and international transportation

Through our international allies, we develop complete solutions, backed by our representations or business partners. Our global structure allows us to find the product you require anywhere in the world and deliver to your hands. Besides, we offer on demand supply service using our warehouse facilities which allows you to reduce inventories.
